

補充教材

CORONA人門課

Transition動畫呈現

屬性終點

 $transition.to(img\ ,\ \{time=2000,x=1000,transition=easing.outBounce,onComplete=moveBack\})$

屬性變化曲線

到終點時需呼叫的函式

相關Function

cancel() from() pause() resume()

取消一或多 與to相反,由指 暫停動畫 繼續動畫 個動畫 定數值變到現值

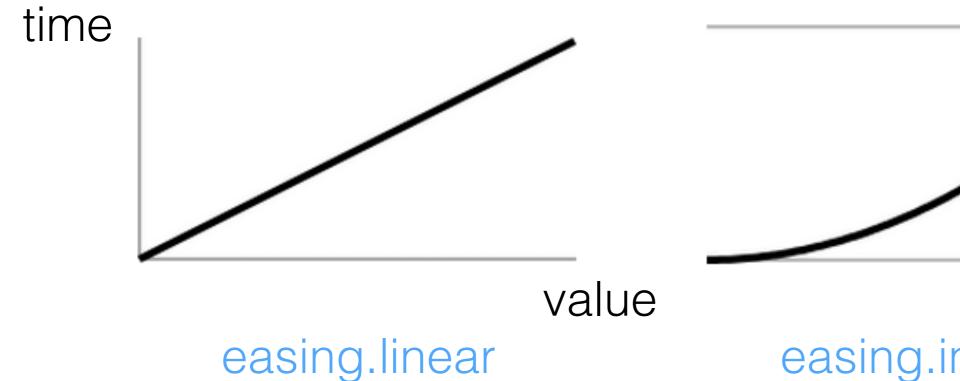

blink() dissolve() scale fade

閃爍效果 溶解效果 縮放效果 淡入出效果

Easing

快速直球

變速曲球

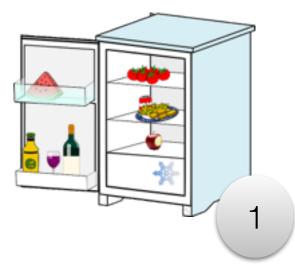

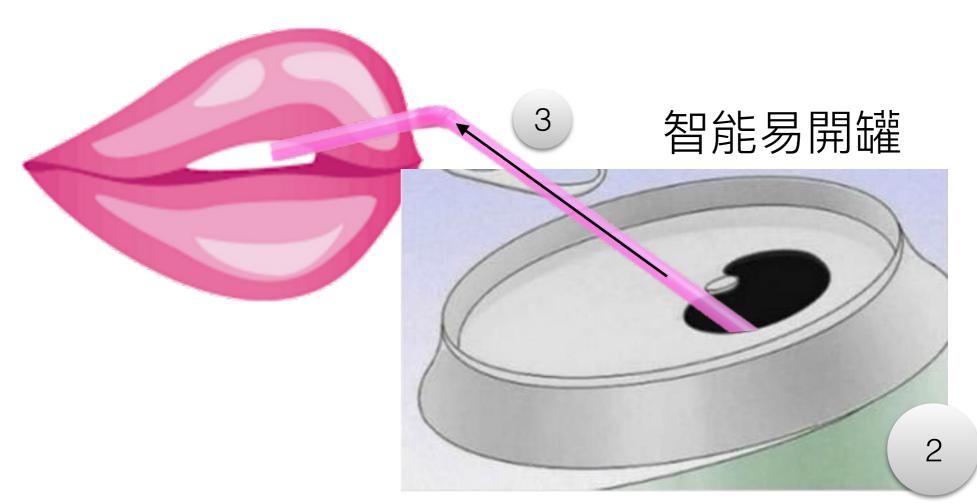

easing.inQuad

檔案存取(IO)

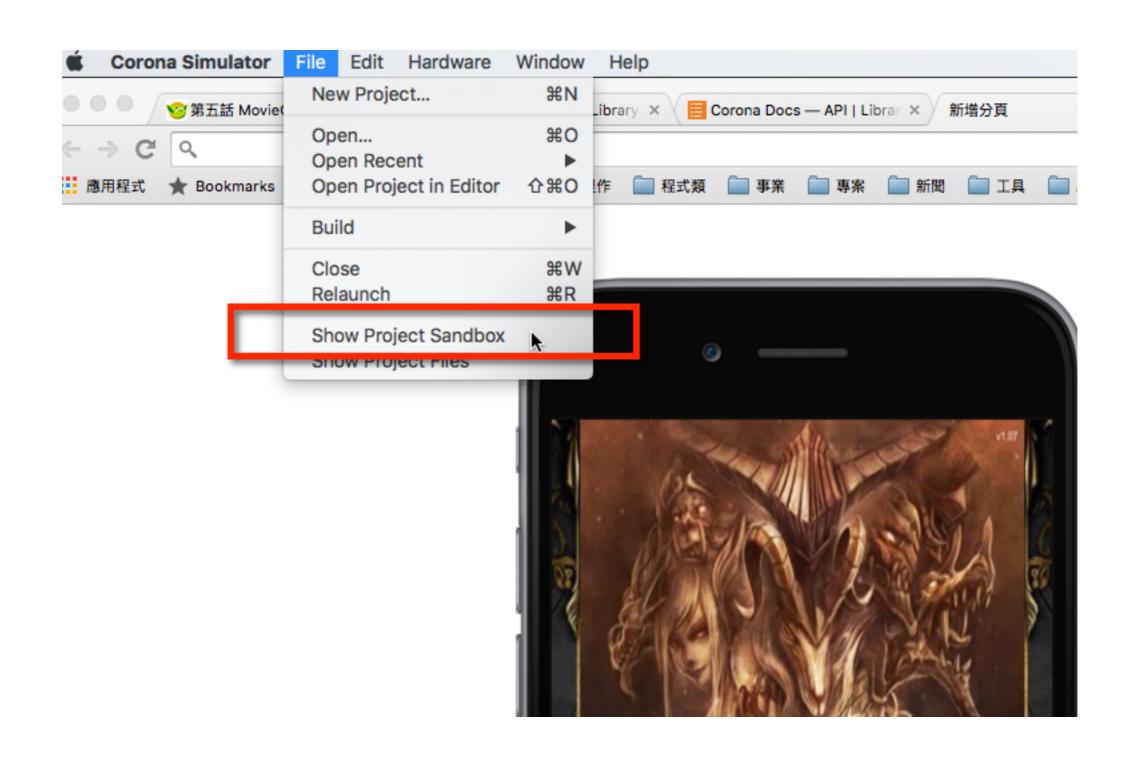

IO概念

取得DocumentFolder

WebView

內嵌式WebView

native.newWebView(中心點X,中心點Y,寬度,高度)

跳出式WebView

native.showWebPopup(中心點X,中心點Y,寬度,高度,網址,選項)

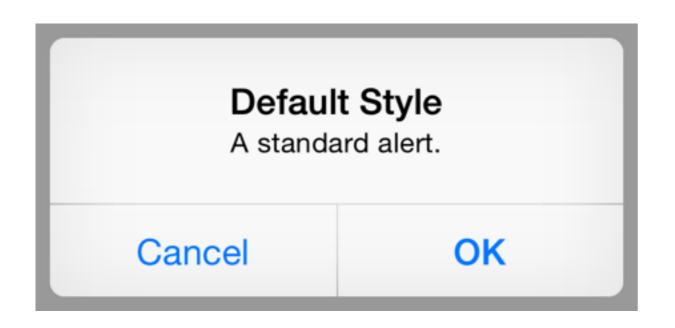

選項

hasBackground autoCancel urlRequest

AlertView

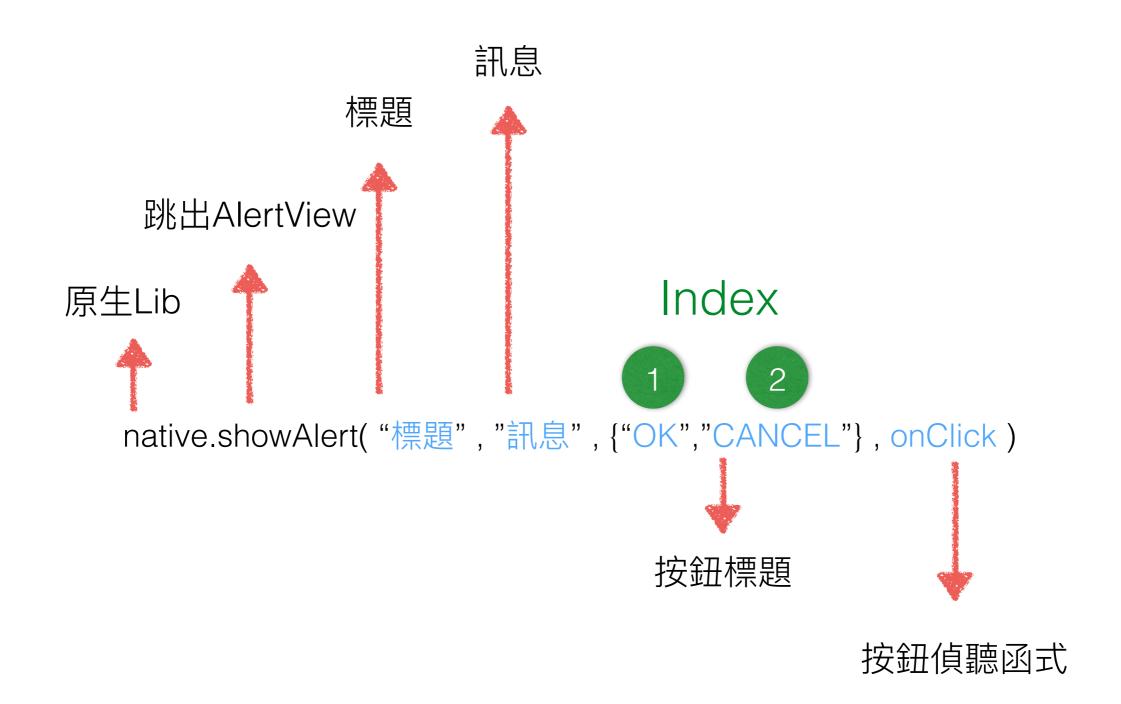

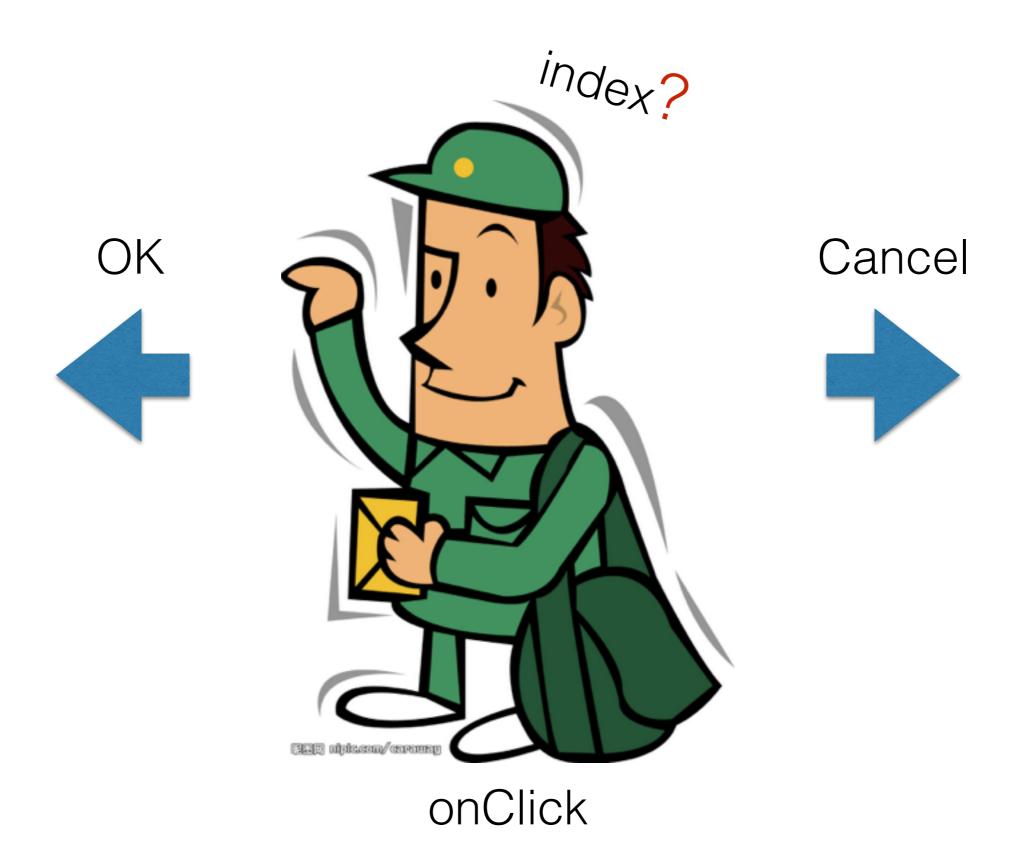

元件外觀

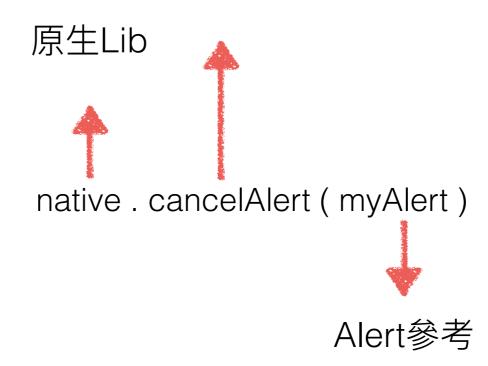

iOS Android

跳出AlertView

Build Windows App

config.lua

width height scale xAlign/yAlign 內容寬度 內容高度 設定縮放方式 對齊錨點

letterbox(黑邊)
zoomEven(出血)
zoomStretch(扭曲)

left/center/right top/center/bottom

build.settings

Widgets

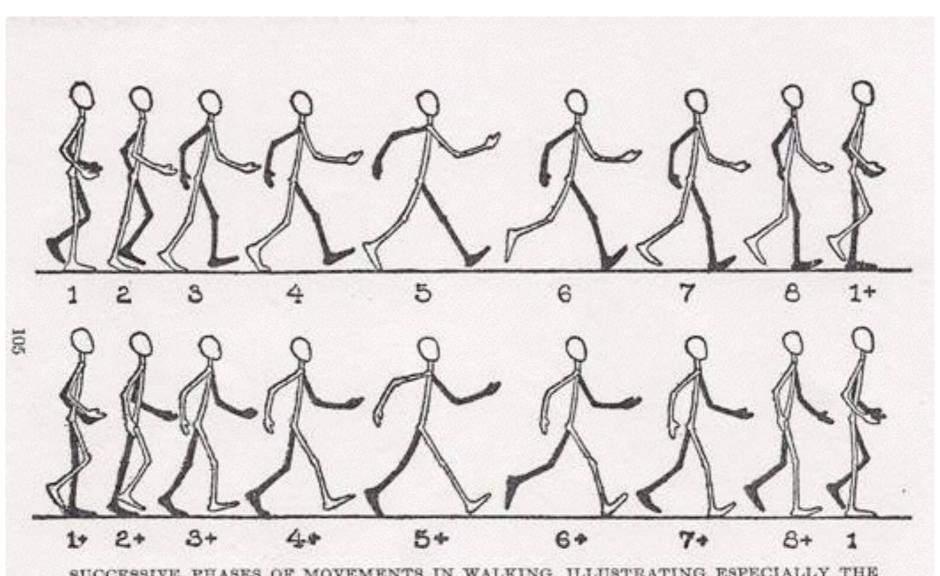

newButton

```
local widget = require( "widget" )
-- Function to handle button events
local function handleButtonEvent( event )
   if ( "ended" == event.phase ) then
        print( "Button was pressed and released" )
    end
end
-- Create the widget
local button1 = widget.newButton(
       left = 100, X, Y
        top = 200,
        id = "button1",
        label = "Default",
        onEvent = handleButtonEvent
```

Movie Clip

逐格動畫

SUCCESSIVE PHASES OF MOVEMENTS IN WALKING, ILLUSTRATING ESPECIALLY THE RECIPROCAL ACTION OF THE LIMBS,

常用Function

newAnim() play() reverse() nextFrame()

生成動畫元件 播放動畫 以反向播放 跳到下一幀

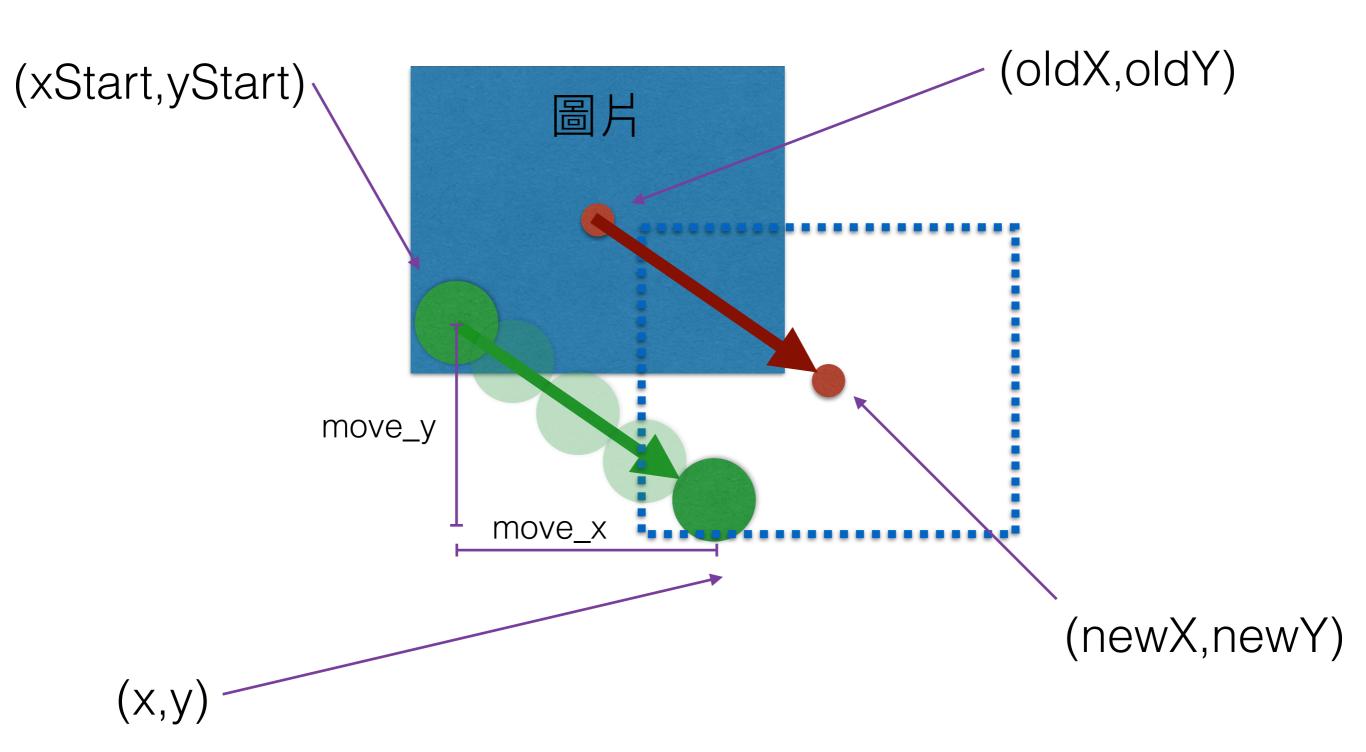

previousFrame() stop() stopAtFrame()

跳到上一幀 停止 停在第幾幀

進階課程

拖移邏輯

進入他檔

require('public')

var1

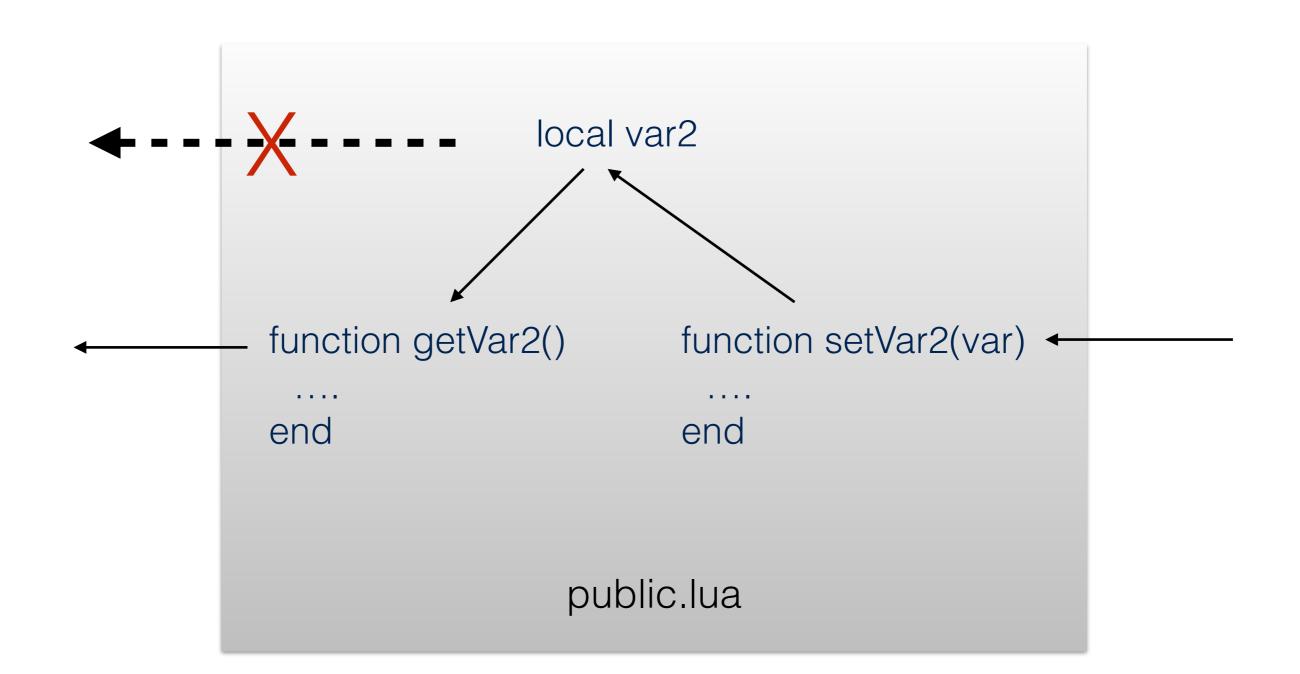

function fun1

end

public.lua

main.lua

封裝策略

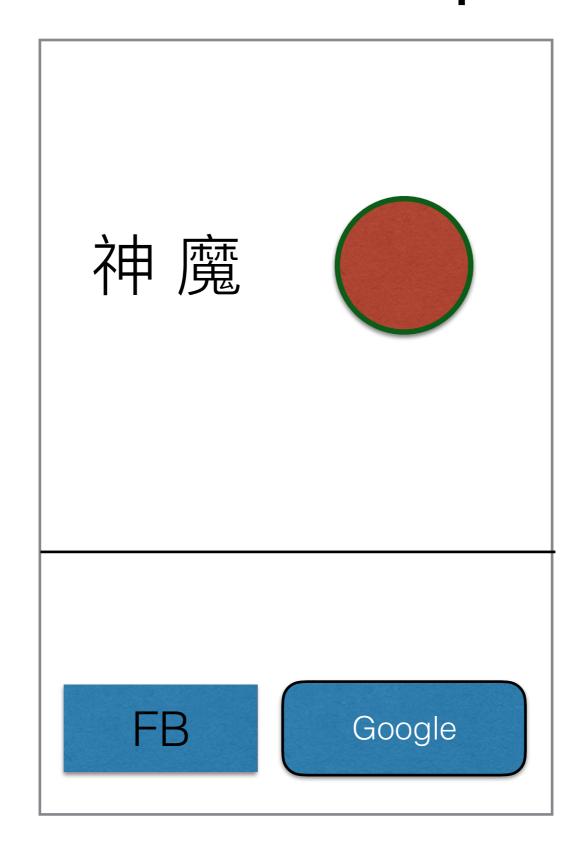

作業與練習

DrawShape

Group + DrawShape

- 1. 建一群組在中央▼
- 2. 設定並啟動錨點
- 3. 移動x:-20 y:40

- 1. 生成一直線
- 2. 圆角正方形
- 3. 圓形

Composer + Timer

main.lua 負責顯示Logo menu.lua 顯示按螢幕開始 game.lua 顯示一張圖片

→ 三秒後切換

> 點螢幕後切換

Composer + Timer + Widget

main.lua 負責顯示Logo menu.lua 顯示按螢幕開始 login.lua 顯示五個按鈕

> 點螢幕後切換

- 0.按到的按鈕用print印出來
- 1.預設Button1的Alpha為1,其他0.4
- 2.點到的Button的Alpha為1,其他0.4

挑戰:使用迴圈來生成按鈕
