Corona入門課

Lua進階

type

- > print(type(100)) number
- > print(type('aa'))
 string

do block裡的local

```
> aa = 'global variable'
> do
> local aa = 'bb'
> print(aa)
> end
bb
```

> print(aa) global variable

取代为建函式

- > orig_print = print
- > function new_print(val)
- > orig_print('aa'..val)
- > end
- > print = new_print
- > print('cc')

aacc

Tables世可物件導向

```
> function aa()
   local function bb()
      return 'bb'
> end
> local function cc()
      return 'cc'
> end
> return {bb = bb, cc = cc}
> end
                                          bb
> print(aa().bb())
> print(aa().cc())
                                          CC
```

Tables物件導向2

- $> aa = {}$
- > function aa:print()
- > print('aa')
- > end
- > aa:print()

aa

string.常用函數2

char(ASCII_Num)	將ASCII數值轉為字元
format(pattern,)	將pattern的佔位字元用後方參數替代
gsub(string,pattern,sub)	將字串內的pattern字串更換為sub字串
find(string,pattern)	找出字串內符合pattern的開始位置
match(string,pattern)	找出字串內符合pattern的部分字串內容
